

## Product Series R5/T5

The screw-in temperature sensors of series R5 (resistance thermometer) and T5 (thermocouple assembly) essentially consist of a gauge slide protruding from the connecting head. We deliver measurements of 3 mm, 4,5 mm and 6 mm diameters ex works. Moveable compression fittings, clamping ring couplings or fixed threaded connectors with or without neck pipe are used as process connectors.

These process connectors do not serve as zone separation. This product series can only be applied in zone 1 (Gas-Ex).
